Listing of Claims:

This listing of claims is provided for the convenience of the Examiner. No claims have been amended.

Listing of Claims:

 (Original) A method of making a slurry coated electrode, the method comprising: dry blending dry carbon particles and dry binder to form a dry mixture comprised of the dry carbon particles and the dry binder;

liquefying the dry mixture with a solution to form a slurry; applying the slurry to a current collector; drying the slurry; and compacting the current collector and slurry.

- 2. (Original) The method of claim 1, wherein the step of blending comprises a step of dry fibrillizing the mixture.
- 3. (Original) The method of claim 2, wherein the dry fibrillizing step comprises milling the mixture.
- 4. (Original) The method of claim 2, wherein the dry fibrillizing step comprises subjecting the mixture to high shear forces.
- 5. (Original) The method of claim 2, wherein the dry fibrillizing step utilizes a high-pressure gas.
- 6. (Original) The product of claim 5, wherein the high-pressure gas comprises a pressure of more than 60 PSI.
- 7. (Original) The product of claim 5, wherein the gas comprises a water content of no more than 20 PPM.
- 8. (Original) The method of claim 1, further comprising the step of treating the current collector prior to applying the slurry to improve adhesion between the current collector and slurry.

- 9. (Original) The method of claim 8, wherein the step of treating the current collector further comprises coating the current collector with a bonding agent prior to applying the slurry.
- 10. (Original) The method of claim 8, wherein the step of treating the current collector further comprises roughening a surface of the current collector prior to applying the slurry.
- 11. (Original) The method of claim 1, wherein the dry binder comprises a fluoropolymer.
- 12. (Original) The method of claim 11, wherein the fluoropolymer particles comprise PTFE.
- 13. (Original) The method of claim 1, wherein the mixture comprises conductive particles.
- 14. (Original) The method of claim 1, wherein the mixture comprises activated carbon particles.
- 15. (Original) The method of claim 1, wherein the mixture comprises approximately 50% to 99% activated carbon.
- 16. (Original) The method of claim 11, wherein the mixture comprises approximately 0% to 25% conductive carbon.
- 17. (Original) The method of claim 11, wherein the mixture comprises approximately 0.5% to 20% fluoropolymer particles.
- 18. (Original) The method of claim 11, wherein the mixture comprises approximately 80% to 95% activated carbon, approximately 0% to 15% conductive carbon, and approximately 3% to 15% fluoropolymer.
- 19. (Original) The method of claim 1, wherein the solution comprises deionized water
- 20. (Original) The method of claim 1, wherein the current collector comprises aluminum.
- 21. (Original) The method of claim 1, wherein the step of applying the suspension comprises coating the current collector with the slurry using a doctor blade, a slot die, or a direct or reverse gravure process.

- 22. (Withdrawn) A blend of dry particles fibrillized for use in the manufacture of a coated electrode, comprising: a mixture of dry fibrillized dry carbon and dry binder particles.
- 23. (Withdrawn) The particles of claim 22, wherein the dry binder particles comprise a polymer, and wherein the dry carbon particles comprise activated and conductive carbon.
- 24. (Withdrawn) The particles of claim 23, wherein the binder comprises fluoropolymer particles.
- 25. (Withdrawn) The particles of claim 24, wherein the binder comprises PTFE.
- 26. (Withdrawn) The particles of claim 23, wherein the binder comprises particles subjected to high shear forces.
- 27. (Withdrawn) The particles of claim 26, wherein the high shear forces are applied by gas at more than about 60 PSI.
- 28. (Withdrawn) The particles of claim 26, wherein the binder comprises milled polymer particles.
- 29. (Withdrawn) The particles of claim 26, wherein the binder comprises jet milled polymer particles.
- 30. (Withdrawn) The particles of claim 26, wherein the binder comprises hammer milled polymer particles.
- 31. (Withdrawn) The particles of claim 24, wherein the electrode is an energy storage device electrode.
- 32. (Withdrawn) The particles of claim 31, wherein the energy storage device is a capacitor.
- 33. (Withdrawn) An electrode, comprising; a dry blend of dry carbon particles and dry binder particles subjected to high shear forces.
- 34. (Withdrawn) The electrode of claim 33, wherein the blend comprises approximately 50% to 99% activated carbon.

- 35. (Withdrawn) The electrode of claim 33, wherein the blend comprises approximately 0% to 25% conductive carbon.
- 36. (Withdrawn) The electrode of claim 33, wherein the blend comprises approximately 0.5% to 20% fluoropolymer.
- 37. (Withdrawn) The electrode of claim 33, wherein the blend comprises approximately 80% to 95% activated carbon, approximately 0% to 15% conductive carbon, and approximately 3% to 15% fluoropolymer.
- 38. (Withdrawn) The electrode of claim 33, wherein the electrode is a capacitor electrode.
- 39. (Withdrawn) The electrode of claim 38, wherein the electrode is a double-layer capacitor electrode.
- 40. (Withdrawn) The electrode of claim 33, wherein the electrode is a battery electrode.
- 41. (Withdrawn) The electrode of claim 33, wherein the electrode is a fuel-cell electrode.
- 42. (Withdrawn) The electrode of claim 33, further comprising a current collector, wherein the binder and carbon particles are in the form of a coated dried slurry, wherein the slurry is coupled to the current collector.
- 43. (Withdrawn) A capacitor product, comprising;
- a dry fibrillized blend of dry particles subjected to high shear forces, the particles including binder and carbon particles; and
- one or more current collector, wherein the blend of dry particles are disposed onto the one or more current collector as a coating.
- 44. (Withdrawn) The product of claim 43, wherein between the one or more current collector and the dry particles is disposed a bonding layer.
- 45. (Withdrawn) The product of claim 43, wherein the one or more current collector comprises aluminum.

- 46. (Withdrawn) The product of claim 45, further comprising a housing, wherein the one or more current collector is shaped as a roll, wherein the roll is disposed within the housing.
- 47. (Withdrawn) The product of claim 46, wherein within the housing is disposed an electrolyte.
- 48. (Withdrawn) The product of claim 47, wherein the electrolyte comprises acetonitrile.
- 49. (Withdrawn) The product of claim 43, wherein the capacitor is rated to operate at a voltage of no more than about 3.0 volts.
- 50. (Withdrawn) An energy storage device, comprising: dry fibrillized electrode means for providing coated electrode functionality in an energy storage device.
- 51. (Withdrawn) A capacitor, the capacitor comprising:
 - a housing;
 - a cover;
- a collector, the collector disposed in the housing, the collector comprising two ends, a first end coupled to the housing, a second end coupled to the cover;
- a dried electrode slurry, the dried electrode slurry disposed as a coating onto the collector, the dried electrode slurry comprising a dry fibrillized blend of dry carbon and dry polymer, the dry fibrillized blend comprising of essentially no processing additive; and
 - an electrolyte, the electrolyte disposed in the housing.
- 52. (Withdrawn) The capacitor of claim 51, wherein the capacitor comprises a capacitance of greater than 1 Farad.
